INTRODUCTION

OWL Bookkeeping for Realtors (BFR) is an easy-to-use program that is designed to maintain complete and accurate accounting of income and expenses. In creating Bookkeeping for Realtors, our objective was to produce a program that is intuitive and requires no prior knowledge of accounting. BFR uses the "single entry" bookkeeping method that is recommended by the IRS. This accounting method is easy to use and is equally suited for small businesses and individuals.

Using BFR, you can produce a variety of expense, income, profit and general ledger reports. You can define up to 1000 different income and expense accounts to fully categorize your income and expenses for tax purposes.

BFR employs the concept of folders where each folder contains income and expense data that may be reported either separately or in combination. Thus, Bookkeeping for Realtors may be used for multiple businesses, multiple divisions within a single business or for both business and personal accounting.

Bookkeeping for Realtors is linked to OWL's Simple Business Invoicing and Inventory management program (SBII) via an import option that transfers income data from SBII into Bookkeeping for Realtors. SBII provides complete tracking of sales, inventory, customers and receivables. The combination of SBII and Bookkeeping for Realtors provides a complete business management solution for many small businesses.

Before using this program, please review all information contained in the BFR README file. This file contains important information about system requirements, configuring your system for proper operation and upgrading data from previous versions of Bookkeeping for Realtors and OWL Basic Bookkeeping.

LEARNING BOOKKEEPING FOR REALTORS

Bookkeeping for Realtors (BFR) comes with sample data that is intended to allow new users to quickly become familiar with the program. The sample data covers calendar year 2008.

The following steps will help you get to know the basic functions of BFR.

All functions within the program can be accessed using standard windows drop down menus along the top of the main screen. In addition, the most commonly used functions including report generation, editing income and expense data, file maintenance and program setup may be accessed using the tabbed pages on in the main window. To switch tab sheets, simply click the labeled tab.

Setup your printer. From the File menu choose Setup -- Printer then select your printer, paper size and paper orientation (portrait or landscape).

Setup your report font. From the File menu choose Setup – Report Font. Choose a font to use when creating on-screen and printed reports. We recommend Times New Roman at a pitch of 12 or Arial at a pitch of 10 to 11.

Test the reports. Choose the Reports panel by clicking the Reports button. Run each of the reports and examine the output. When running the reports, be sure to select a reporting period within calendar years 2005 through 2006. The default reporting period is the current month.

Add an expense. From the Income and Expenses panel click on the Expenses button. Try adding an expense record by selecting the Add button on the Select Expense screen.

Edit an expense. Click on the Expenses button then select an expense record by double clicking on the record. The currently highlighted record may be selected by clicking on the Select button.

Print a check. Click on the Expenses button then select an expense record. Click the Print Check button. On the Print Check window you may make any edits necessary for the printed check. The amount of the check defaults to the total of all expenses that have been entered in the selected folder that have the selected check number. In other words, if you have entered multiple expense records with the same check number, the default amount on the printed check will be the total of those expense records. You may edit the amount if needed.

Add an income record. From the Income and Expenses panel click on the Income button. Try adding an income record by selecting the Add button on the Select Income screen.

Edit an income record. Click on the Income button then select an income record by double clicking on the record.

Delete an income or expense record. Click on the Income or Expense button then select a record to be deleted. When the record is displayed, click on the Delete button.

Reexamine the reports to see how the items you have entered have changed the reports.

Preparing for Data Entry

Once you have become familiar with Bookkeeping for Realtors' income, expense and report options, it's time to set up the program for any unique requirements of your business. The following steps allow you to begin using Bookkeeping for Realtors for your business.

Examine the chart of accounts. Select the Report Generation panel and click on the Expense Reports button then choose Chart of Accounts. Print the report and repeat these steps for the Income Chart of Accounts. Examine the reports. You may need to add new accounts, change the numbering scheme, or start from scratch to match your present accounting system.

Delete the sample data.

Method 1: If you don't plan on making significant changes to the chart of accounts then the easiest way to get rid of the sample data is to erase the "Sample Data" folder. Click the Folders button from the Income and Expenses panel then select the "Sample Data" folder. Click the Delete button to delete the folder and all of its contents. Once deleted, define a new folder to hold your data if you have not already done so.

Method 2: From the File menu choose File Maintenance – Erase Data Files. You may choose which of the sample data files you want to erase. While you should definitely erase the income and expenses files, we suggest that you **do not erase the Accounts** database unless you are converting from another accounting method that has different accounts or you have made a decision to start with a different numbering system.

Create folders for your business. On the Income and Expenses panel click on the Define Folders button. If you did not delete the sample folders, you may wish to edit the folder names. Otherwise add one or more folders to reflect your accounting needs.

Add or edit income and expense accounts. On the Income and Expenses panel click the Income Accounts and Expense Accounts buttons to add or edit the account names and numbers needed for your business. **Note** that all account definitions are shared by all folders.

Setup your fiscal year. If your business operates on other than a calendar year, from the File menu choose Setup – Fiscal Year. Enter the starting month and day of your fiscal year.

Setup your mileage rate. From the File menu choose Setup – Mileage Rate. Enter the unit of distance (Miles or Kilometers) that you use and the allowable rate per mile/kilometer that you can deduct.

Entering Data

Data to be entered into Bookkeeping for Realtors is falls into the following categories:

- **Dates:** Dates are entered by clicking the drop-down arrow in the date field and selecting the date from the pop-up calendar. Individual fields (month, day, year) within the date may be also be incremented using the up and down arrow keys on the keyboard.
- **Monetary Amounts:** Monetary amounts are entered using the decimal separator defined in the international settings in the Windows control panel. Thousands separators and currency symbols are ignored when entering monetary amounts.
- **Plain Text:** Text entered for descriptions of income and expenses is generally limited to 30 characters.
- **Check Boxes:** Check boxes are used to indicate the taxable or deductible status of accounts. When a value is checked, it indicates a true condition. For example, if the Taxable box is checked then income in the account is listed as taxable income.
- **Drop Boxes:** Used for selecting the Account and Folder for Income and Expenses these appear as text boxes with a down arrow to the right of the text. Click on the down arrow to change the selection.

Auto-Fill Feature: The program provides shortcuts in filling out some text fields by matching the user's keystrokes with a database of text that was previously entered into that field. A match is not attempted until the user has entered at least 3 keystrokes. If a match is found, it is displayed and if correct the user may simply proceed to data entry for the next field. If the match is not correct, the user may continue typing until the entry is complete or the correct match is found.

Occasionally, inappropriate matches may appear on a regular basis because a record containing incorrect text (e.g., misspelled or inappropriately capitalized words) in an auto-fill field was once saved. This condition may be corrected by clicking the "Edit Auto-Fill" button and editing or deleting the offending entry.

PROGRAM SETUP

Report Font

The Fonts option is used to select the font and font size that will be used for displaying and printing reports. Font sizes are limited to 10 through 12 pitches.

Hint: If you select a font that is too large to show all data when printing a report, Bookkeeping for Realtors will automatically reduce the font size to fit the page and page orientation selected. This may cause reports to paginate too frequently yielding large blank areas at the bottom of report pages. If this occurs, change your report font to a smaller pitch.

Page Setup

When printing reports, Bookkeeping for Realtors sends reports to the default windows printer using the default printer orientation (i.e., Portrait or Landscape). The Page Setup option may be used to change printers, paper size, orientation and other printer options supported by your specific printer.

Set Password

The Password option is used to enable or disable password protection for running BFR.

To enable password protection from the File menu choose Setup -- Set Password then:

1. Enter your password and click OK
2. Confirm your password by entering it again.

The same process is used to change your password. Setting a blank password disables password protection.

WARNING: OWL SOFTWARE WILL CHARGE A FEE FOR RECOVERY OF DATA IF YOU LOOSE YOUR PASSWORD.

Fiscal Year Setup

This option allows you to set the month and day in which your fiscal year starts. Enter the month and day of the start of your fiscal year. The default is January 1.

Mileage Rate Setup

If you will be deducting automobile expenses based on a standard mileage rate, you should specify the unit of measure ("Miles" or "Kilometers") and the amount of the expense per unit of measure. The default is 0.325 (32.5 cents) per Mile. When entering expenses, you may then enter just the distance and the program will compute the expense amount based on that distance and the rate you have specified.

Check Layout

While the check layout is predefined for check stock ordered through OWL Software, due to differences in printers it may become necessary to adjust the predefined layout to correctly align the printing on the check stock.

Before modifying the layout, print a test check on blank paper. Once you have your sample, overlay it on the check to check the alignment. If the alignment needs to be adjusted click the Edit Check Layout button under the Setup tab. Measurements are in millimeters (25.4 millimeters per inch). Increase or decrease the values by the amount you want to move the printing. Save the changes then print another test.

Order Checks

The Order Checks button launches your internet browser and takes you to the OWL Software web site for ordering checks that are designed for use with Bookkeeping for Realtors. Alternatively, you may go to the OWL Software web site to order checks. **Before printing your first check, we strongly recommend you verify that the predefined check layout will work with your printer.** See Check Layout above.

FILE MAINTENANCE

The File Maintenance functions are found in the Main Menu under File. They are described as follows.

Backup

The Backup option creates a backup copy of your data files. Files may be backed up to any accessible write enabled drive or directory. Select the drive and directory where you want to store the backup files. Any existing backup files will be overwritten.

Restore

The Restore option copies backup data files created with the Backup option, to your active data directory and recreates the necessary index files. If your backup data consists of multiple disks, you must insert the disks in the proper order.

Archive

The Archive option is designed to both secure your data from unintended editing and to maintain system performance. Archived income and expense records are flagged so that they do not appear in pick lists for editing purposes. Archived records are, however, available to the system for inclusion in reports.

We suggest that, after closing your books for a given period you archive that period's records. This will help your system operate at peak efficiency.

After clicking the Archive button, enter the date span that you want to archive.

DeArchive

The De-Archive option may be used to restore previously archived income and expense data to make it available for editing. This is most useful in the event that you need to go back and review or change data from a prior year.

After clicking De-Archive button, enter the date span that you want to de-archive.

Erase Data Files

The Erase Data Files button erases all data from selected database files. Generally, you will use this option only to initialize the database files to accept your own data after becoming familiar with the program using the sample data. Note that you may erase any or all of your data files using this option.

WARNING: Go slow and read each screen so that you don't accidentally erase data you wanted to keep.

Hint: Bookkeeping for Realtors contains a list of expense accounts that provide most users with a good starting point for categorizing their expenses. We suggest that you do not erase the Accounts database unless you are converting from another accounting method that has different accounts.

Re-Index

The Re-Index option recompiles the database index files. Use this option after any abnormal exit from the program or if you find that data is missing from your files.

Pack

The Pack button physically removes records from your data that have been marked for deletion and returns the saved physical disk space to the operating system. BFR automatically attempts to pack data files each time the program is exited. In instances when the program is run on a network, the required exclusive access to the data files may not be available when the attempt is made. The Pack button then may be used to force packing of the databases.

INCOME AND EXPENSES

Options for entering income and expenses, setting up folders, and setting up income and expense accounts are located on the Income and Expenses panel.

Entering Income

Before entering your own income records you must first define one or more folders and income accounts. Please see the Preparing for Data Entry section before entering any of your own data.

To add, edit or delete income records click on the Income button on the Income and Expenses panel.

Once you have clicked on the Income button, a pick-list of income records presently in the system will be displayed. To edit or delete an existing record select the record by double clicking on it or by highlighting it and clicking on the Select button. To add a new record, click on the New button.

The income screen is composed of the following fields.

Field	Action
Date	Enter the date the income was received
Amount	Enter the amount of income received
Description	Enter a description of the income. This might include the name of the payer or the source of the income. The program will attempt to automatically fill in this entry if it finds a match with a previous entry.
Account	Select the appropriate account from the drop down list. The list contains all Income Accounts that you have defined.
Folder	Select the appropriate folder from the drop down list. The list of folders contains all of the folders that you have defined. See Folders, below.

Command buttons at the bottom of the screen function as follows:

Button	Action
Save	Saves the currently displayed record. If you are editing an existing record, the original record is overwritten.
Delete	Deletes the currently displayed record. Note that this option is disabled when adding new records.
Cancel	Discards any changes to the currently displayed record and returns to the Income Selection menu.

Import Income

This option is provided for users of Simple Business Invoicing and Inventory (SBII). The option automatically transfers records of payments received from SBII to the income database of Bookkeeping for Realtors.

After clicking on the Import Payments button, the Import Payments screen will be displayed. The screen is composed of the following fields.

Field	Action
SBII	Choose the drive and directory where your SBII data resides. If you installed SBII using the default directory, this field will already be filled in for the most current version of SBII on your system.
Import Beginning	Enter beginning date for the payments you wish to import. The default is the beginning of the current fiscal year.
Import Through	Enter the ending date for the payments you wish to import. The default is today's date.
Import to Account	Select the Income Account into which the payments will be imported.
Import to Folder	Select the Folder into which the payments will be imported.

Once you have completed entering all of the information on the screen you may click the Import button to begin the transfer.

Note: In order to prevent duplicate income records, all previously imported data within the specified date span will be deleted and replaced by the current payment information in the SBII database. This has no effect on income data that has been entered manually, but if you edited a previously imported record, your changes will be lost if the record is within the date span being imported.

Entering Expenses

Before entering your own expense records you must first define one or more folders and expense accounts. Please see the Preparing for Data Entry section before entering any of your own data.

To add, edit or delete expense records click on the Expense button under the Income and Expenses tab.

Once you have clicked on the Expense button, a pick-list of expense records presently in the system will be displayed. To edit or delete an existing record select the record by double clicking on it or by highlighting it and clicking on the Select button. To add a new record, click on the New button.

The Expense screen is composed of the following fields.

Field	Action
Paid by	Select the method used to pay the expense. Note: Reports can be generated for individual payment methods (e.g., Expenses paid by cash).
Check No.	If the expense was paid by check, enter the check number.
Date	Enter the date the expense was paid.
Miles/KM	This field is used if you need to track expenses based on the number of Miles or Kilometers driven. The program records the distance entered and automatically computes the expense amount based on the rate entered in your mileage rate setup.
Amount	Enter the amount of the expense.
Pay To	Enter the name of the person or company to whom the expense was paid. The program will attempt to automatically fill in this entry if it finds a match with a previous entry. See Auto-Fill Feature for more information.
Memo	This is a text field that can be used to further describe the nature of the expense.
Account	Select the appropriate account from the drop down list. The list of available accounts contains all of the expense accounts that you have defined.
Folder	Select the appropriate folder from the drop down list. The list of available folders contains all of the folders that you have defined.

The command buttons at the bottom of the screen function as follows:

Button	Action
Save	Saves the currently displayed record. If you are editing an existing record, the original record is overwritten.
Delete	Deletes the currently displayed record. Note that this option is disabled when adding new records.
Cancel	Discards any changes to the currently displayed record and returns to the Expense Selection menu.
Print Check	Saves the expense record and opens the check printing window.

Print Check

Checks may be printed on Laser/Inkjet checks ordered through OWL Software. **Before printing your first check, we strongly recommend you verify that the predefined check layout will work with your printer.** See Check Layout below.

To print a check, click on the Expenses button then select an expense record. Click the Print Check button. Data from the selected expense record is automatically transferred to the Print Check window. If you have entered multiple expense records with the same

check number, the amount transferred to the Check Print window will be the total of expense records having the selected check number.

Before clicking the Print button, you may make any edits necessary for the check to be printed.

Ordering Checks

The Order Checks button launches your internet browser and takes you to the OWL Software web site for ordering checks that are designed for use with Bookkeeping for Realtors. Alternatively, you may go to the OWL Software web site to order checks.

Check Layout

While the check layout is predefined for Laser/Inkjet checks ordered through OWL Software, due to differences in printers it may become necessary to adjust the predefined layout to correctly align the printing on the check stock.

Before modifying the layout, print a test check on blank paper. Once you have your sample, overlay it on the check to check the alignment. If the alignment needs to be adjusted click the Edit Check Layout button under the Setup tab. Measurements are in millimeters (25.4 millimeters per inch). Increase or decrease the values by the amount you want to move the printing. Save the changes then print another test.

Rate Change

The Mileage Rate Change is a special option that updates expense amounts that were previously computed using a different rate. This is useful when the deductible allowed by the IRS is changed retroactively.

After selecting the Mileage Rate Change option, enter the following information.

Field	Action
New Rate	Enter the new rate. For auto mileage, this would be new allowable cost per mile.
Apply From	Enter the date the new rate went into effect.
Apply Through	Enter the date of the day before you began entering your rate based expenses using the new rate.

Note: This does not make any of the changes to the Mileage Rate Setup that is applied to future entries. From the main menu, choose File – Setup – Mileage Rate to edit the rate that will be applied to future entries.

Income and Expense Accounts

The Income and Expense Accounts buttons allows editing of a “chart of accounts” for income and expenses respectively. The system is capable of accepting up to 9999 different accounts for categorizing your income and expenses.

Note: Income and Expense accounts are maintained separately and both must be defined.

Note: Account definitions are shared with all folders.

A good start in setting up account categories is to study the IRS tax forms you expect to be filing or have filed in the past. At the minimum, you should establish one account for each of the line items on the IRS forms that apply to you.

To add, edit or delete accounts click on the Income or Expense Accounts button on the Income and Expenses page.

Each account record contains the following information.

Field	Value
Account Number	This is a unique number that is assigned to this account.
Description	A description of the type of income (e.g., Ordinary Income, Interest, Dividends, etc.).
Taxable	Income Accounts Only: Check the Taxable box if the income is taxable. Examples of non-taxable income include loans from banks, repayment of loans from employees, etc.
Tax Deductible	Expense Accounts Only: Check the Tax Deductible box if the expense is deductible. Examples of non-deductible expenses include federal income tax, fixed assets, loans to employees, personal expenses, etc.

Hint: From an accounting standpoint, it is better to categorize your income and expenses at a high level of detail. Lumping many different types income or expenses under a category such as “Miscellaneous” makes your records more difficult to understand and could cause confusion and additional accounting expense.

Hint: To merge two accounts, select the account to be eliminated and change the account number to the number of the account into which the two accounts will be merged. Edit the description to reflect the name of the merged account then click the Save button. This will transfer the income or expenses from the selected account to the new account number.

Command buttons at the bottom of the screen function as follows:

Button	Action
Save	Saves the currently displayed record. If you are editing an existing record, the original record is overwritten. Warning: Be sure to read the on-screen messages when saving an existing account with a new account number.
Delete	Deletes the currently displayed record. Note that this option is disabled when adding new records. Note: When deleting an account, all income or expense records that are assigned to that account are also deleted.
Cancel	Discards any changes to the currently displayed record and returns to the Income Selection menu.

Folders

The concept behind folders is to allow users to separate their income and expenses by business activity. For example, a rental property owner may wish to maintain separate income and expense records for each rental property and be able to report income and expenses for both individual properties and all properties combined. In this case the property owner would create a folder for each rental property. When entering income and expenses, the owner enters them into the folder corresponding to the property where the income or expense was derived.

The power of folders is rooted in the report generator's ability to generate reports for any selected folder or combination of folders. In the example above, the rental property owner would be able to create a complete set of reports for each individual property and all properties combined.

To add, edit or delete folders click on the Folders button under the Income and Expenses tab.

Each Folder Record contains the following information

Field	Value
Number	A unique number assigned to each folder. When adding new folders the system will assign the next unused number between 1 and 999. The folder number may be edited by subsequently selecting the folder and editing the number.
Description	Enter a descriptive name for the folder.

Command buttons at the bottom of the screen function as follows:

Button	Action
Save	Saves the currently displayed record. Note: When you change a folder number, all income and expense records assigned to the original folder number are reassigned to the new folder number.
Delete	Deletes the currently displayed record. WARNING: When you delete a folder, all income and expense records assigned to that folder are also deleted.
Cancel	Discards any changes to the currently displayed record and returns to the Folder Selection menu.

REPORT GENERATION

The options in the reports menu provide a great range of flexibility for creating reports. Each report can be run for a user specified period of time and for any selected folder or combination of folders. All reports may be previewed on your display for quick reference or printed as a permanent record.

Hint: When you select more than one folder for inclusion in a report, the report contains the income and expenses from the selected folders as if they were a single folder (i.e., the income and expenses are merged into a composite folder).

The types of reports that are available include: Expense Reports, Income Reports, Profit Reports and a General Ledger report.

Expense Reports

Summary Report

The Expense Summary report summarizes expenses for each account within the selected reporting period. The report includes previous fiscal year to date expense totals for each account as well as fiscal year to date totals through the end of the reporting period. Information in the report includes:

1. Account Number
2. Account Description
3. Total Expenses for the account within the reporting period.
4. Total Expenses for the account from the start of the fiscal year to the beginning of the reporting period.
5. Total Expenses for the account from the start of the fiscal year through the end of the reporting period.

Detail Report

The Expense Detail report lists each expense item dated during the selected report period. Information in the report includes:

1. Expense Date
2. Check Number
3. Account Number
4. Name of the person to whom the expense was paid
5. The amount of the expense
6. Expense Memo information.

Account Detail

The Account Detail report lists the same information as the Expense Detail report but for only a single selected account.

Expenses paid by

This report lists the same information as the detail report but includes only those expenses paid by the selected criteria (check, cash, credit card or other).

Chart of Accounts

The Chart of Accounts report lists all defined expense accounts. The accounts are listed in numerical order within subheadings of deductible and non-deductible accounts.

INCOME REPORTS

Summary Report

The Income Summary report summarizes income for each account within the selected reporting period. The report includes previous fiscal year to date income totals for each account as well as fiscal year to date totals through the end of the reporting period. Information in the report includes:

1. Account Number
2. Account Description
3. Total income for the account within the reporting period.
4. Total income for the account from the start of the fiscal year to the beginning of the reporting period.
5. Total income for the account from the start of the fiscal year through the end of the reporting period.

Detail Report

The income detail report lists each income item within the reporting period. Listed information is as follows.

1. Date the income was received.
2. Description of the income.
3. Whether the income record was imported from the OASIS system.
4. The amount of income received.

Account Detail

The Account Detail report lists the same information as the Income Detail report but for only a single selected account.

Chart of Accounts

The Chart of Accounts report lists all defined income accounts. The accounts are listed in numerical order within subheadings of taxable and non-taxable accounts.

Profit Reports

Profit reports can be generated for any period of time and are available in either weekly or monthly form. The weekly report lists seven day totals of income and expenses for the specified reporting period. Likewise, the monthly report lists totals for each month within the reporting period. The report lists the following information.

1. Starting and ending dates.
2. Taxable income.
3. Deductible expenses.

4. Taxable Profit or (Loss).
5. Non-Taxable income
6. Non Deductible expenses
7. Net Profit

Reporting period totals are listed at the end of the report.

General Ledger

As its name implies, the ledger report produces a general ledger containing a detailed list of credits (income) and debits (expenses) with a running balance. Within each fiscal year, the totals of credits, debits and the fiscal year-to-date balance are brought forward. The report lists the following information.

1. Credit or debit date.
2. Description of the credit or debit.
3. Amount of the credit or debit.
4. Fiscal year-to-date balance of credits and debits.

Check Register

The check register report is designed to assist in reconciling a checking account register. When entering expenses it is often necessary to enter several expense records for different accounts with the same check number. The check register report lists each expense recorded for selected checks and provides a total for each check. This helps the user verify that the entire amount of the check has been accounted for within BFR.

UPGRADING DATA FROM BOOKKEEPING FOR REALTORS 1

Data files from Bookkeeping for Realtors Version 1 are fully compatible with Bookkeeping for Realtors Version 2. To transfer data from Version 1 to Version 2, run Version 1 and choose the Backup Data option under File - File Maintenance. Next, run Version 2 and choose the Restore Data option under the File Maintenance tab. Choose the drive and directory containing your Version 1 backup data.

OWL PRODUCT INFORMATION

Otto-Williams Ltd. (OWL Software) is committed to producing intuitive, easy to use, software solutions that meet the challenges of today's fast paced world. OWL programs have been rated among the best software available by major publications including *PC World*, *Computer Novice* and the *Financial Times*.

No more deciphering complex programs and plowing through confusing software manuals. At OWL, we listen to our customers and design our programs to be easy to use with: simple menus, context sensitive help, on-line user's guides, and sample data where needed, to help you get started fast. Our programs allow you to be fully operational within minutes.

Master Investor

MI is a fully integrated system that combines portfolio management with technical analysis. The purpose of MI is to help individual investors and professional money managers organize and analyze the information that is critical to making informed investment decisions.

Personal Portfolio Manager

Personal Portfolio Manager is an easy to use portfolio management and technical analysis system designed specifically for individual investors who invest with a long term horizon.

Simple Business Accounting

Simple Business Accounting (SBA) is an easy-to-use accounting system designed specifically, for use by small and home based businesses. This new generation of our top rated accounting system (Basic Bookkeeping) has been completely redesigned for Windows 95 and includes an all new interface and powerful new features.

Simple Business Invoicing & Inventory

Simple Business Invoicing and Inventory (SBII) is a complete sales management system that includes: invoicing, inventory management, automated billing, mailing list management, and sales tracking. Invoices and bills can be printed on plain paper or your own letterhead.

Basic Bookkeeping

Basic Bookkeeping (BBK) is a very easy-to-use accounting system that is specifically designed for small and home based businesses. This single entry accounting system is very straightforward and avoids financial jargon so you don't need to be an accountant to understand and use the program.

Bookkeeping for Realtors

Bookkeeping for Realtors (BFR) is a specialized version of our popular Basic Bookkeeping program. This very easy-to-use accounting system is specifically designed for real estate sales professionals who need a fast accurate means of keeping track of their income and expenses including auto mileage.

Please check our web site at <http://www.owlsoftware.com> for current prices and availability.
